

Service basic information

[Updated: February 26, 2026]

Overview

"SAKURA AI Engine" is a pay-as-you-go foundational platform service that allows you to use a variety of generative AI models. All supported LLM models are hosted by SAKURA Internet. All data transmission is strictly confined between the customer and SAKURA Internet, and data used for tasks such as chat completions is never used to train LLMs or other models, ensuring high data security.

Features

SAKURA AI Engine provides four major functions.

1. Chat completion
2. Document management and RAG (Retrieval-Augmented Generation)
3. Audio transcription
4. TTS

Notes ☒

Please note the following points before using.

- This service is not covered by a Service Level Agreement (SLA).
- Even if you ask LLM for the "model name" or "internal specifications," you may not receive an answer that matches the name of the model actually in operation.
- Please note that even on the Foundation Model Free Plan, charges will apply from when you start using RAG (Retrieval-Augmented Generation) until all documents are deleted.
- You cannot cancel your plan without deleting all account tokens and all documents.
- The scope of support is governed by the "Demarcation of Responsibility Between SAKURA Internet and the Customer" section in [Customer Support](#).

Fee structure ☒

Please refer to the [service site](#) for prices. SAKURA AI Engine is based on pay-as-you-go billing for each API call, excluding free portions. If you would like a GPU-dedicated model that is easy to predict costs, please contact us using the

inquiry form on [Sakura AI service site](#).

Support

If you have any questions or concerns, please contact us by selecting

"SAKURA AI Engine" [from the email support menu in the member menu](#).
