

Playground

[Updated: October 8, 2025]

Notes

To use the Playground feature, you need to subscribe to one of SAKURA AI Engine plans.

What is Playground?

Playground is an interface that allows you to easily try out the chat completions function of SAKURA AI Engine on your browser. Before using the API, let's first check how it works in the Playground.

How to use Playground

1. Log in to the control panel

[Access Control Panel](#) and log in.

2. Access Playground

Select `Playground` from the left menu.

Current number of requests

classification	Number of requests
Chat generation (chat completions)	2 requests
Vector embeddings	-
Audio transcription	-
Audio speech	-

The Playground screen will appear.

Please write "Hello World" in Python.

The following is the simplest code example that outputs "Hello World" in Python.

```
python
# Hello World をコンソールに表示する
print("Hello World")
```

hello.py Save this script to a file such as and run it from the command line

```
bash
python hello.py
```

When you execute this, the screen will display

```
Hello World
```

This will be displayed. If Python 3 is installed, it will work as is.

3. Select the Model and Prompt

Playground allows you to specify:

- Model selection
- Entering the prompt

Once you have made your selections and inputs, click the `Submit` button.

Enter your prompt here.

gpt-oss-120b Document

Submit

Notes

Using chat completions in Playground is billable, just like API calls. Please note that for the Foundation Model Free Plan, these requests count toward your free tier limit.

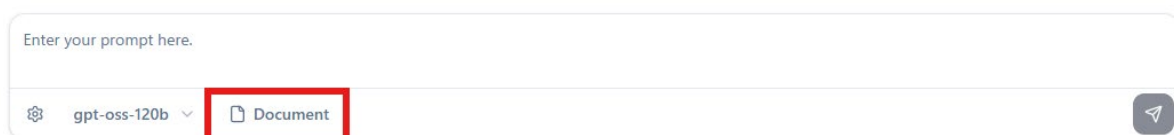

Notes

Features such as Function Call are not available in Playground. Please use this to check the operation of simple chat completions.

About the RAG feature

You can search for documents registered in SAKURA AI Engine and generate answers based on their contents.

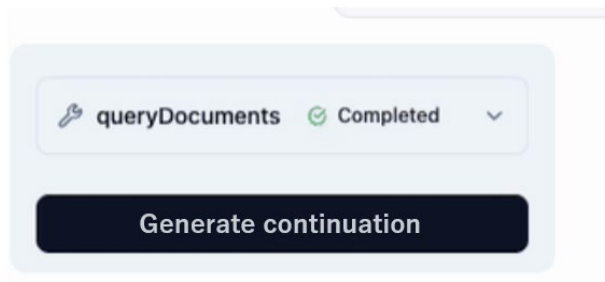

If you select the Document button and then submit the prompt, chat completions will work with document search enabled.

The screenshot shows the Playground interface. At the top is a text input field with the placeholder "Enter your prompt here.". Below the input field is a row of controls. On the left is a gear icon for settings. Next to it is a dropdown menu showing "gpt-oss-120b". To the right of the dropdown is a button labeled "Document" with a document icon, which is highlighted with a red rectangular box. On the far right of the row is a dark grey button with a white paper plane icon for submitting the prompt.

When the RAG feature is used, the RAG API is executed. The continuation will

be generated automatically, but it will stop after 3 executions to prevent an infinite loop. If necessary, press the "Generate continuation" button to generate a continuation.

Notes

Using the RAG feature in Playground is billable, just like API calls. Please note that for the Foundation Model Free Plan, these requests count toward your free tier limit.

Notes

The RAG feature is not used if the model does not support tool calling, or if inference determines that the RAG feature is not required.
